DETAILED ACTION

Examiner's Comments

1. This action is in response to applicant's preliminary amendment received 21 July 2003. Applicant has amended claims 3-5 and 7-9, and added new claims 10-19. The pending claims are now 1-19.

Priority

2. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 4. Claims 1-2, 4, 7, 11, and 16 are rejected under 35 U.S.C. 102(b) as being anticipated by US 3,775,222 to Aspin et al. Aspin et al show the same invention including an apparatus for sealing a longitudinal seam of a flattened tube having a single operator block (7) located inside the tube, the operator block having a laterally projecting edge with a row of emitters (7a) that emit a gaseous fluid heated to a suitable temperature to thermally activate the web material in order to be sealed. Aspin et al further show the row of emitters aligned and juxtaposed with the

inside longitudinal edges (14) of the web (W) as the web is being folded around the operator block (see Figs. 1-2).

The examiner notes that the preamble of claim 1 has not been given patentable weight. A preamble is generally not accorded any patentable weight where it merely recites the purpose of a process or the intended use of a structure, and where the body of the claim does not depend on the preamble for completeness but, instead, the process steps or structural limitations are able to stand alone.

Claim Rejections - 35 USC § 103

- 5. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 6. Claims 3, 5-6, 8-10, 12-15, and 17-19 are rejected under 35 U.S.C. 103(a) as being unpatentable over US 3,775,222 to Aspin et al. As discussed above in this office action, Aspin et al show the invention substantially as claimed, but do not show the operator block having two rows of emitters or being in the shape of an elongated solid with a wide end tapering to a narrower end, or the emitters are substantially rectangular in shape.

It would have been an obvious matter of design choice to use two rows of emitters instead of one row, to use a tapered shaped block, or to use emitters having a rectangular shape since the applicant has not disclosed that the number or rows of emitters or the shape of the operator block solves any stated problem or is for any particular purpose and it appears that the

Art Unit: 3721

invention would perform equally well with either design choice. Specifically, the applicant has stated that main object of the present invention is to overcome the disadvantages of the prior art by providing an apparatus that directs a stream of hot air entirely on the edge to be sealed and straight at the layer of web to be activated. Aspin et al show an apparatus that performs the same function and accomplishes the same objectives.

Conclusion

- 7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Greisman, Sagat et al, Linkiewicz, Pelland, and Pelland et al are cited to show related references.
- 8. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Brian Nash whose telephone number is (703) 305-4959. The examiner can normally be reached on Monday Thursday from 8 a.m. to 5 p.m.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Rinaldi I. Rada can be reached at 703 308-2187.

The fax number for this Group is:

703-872-9306

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Group receptionist whose telephone number is (703) 308-1148.
